OUR PRODUCTS AND SERVICE

Our drive to find innovative products for our customers, together with our technical awareness and understanding of our markets attracts many overseas companies to work with us and to develop their products further. This ensures that Multipix Imaging is able to offer a wide range of complimentary leading edge vision components. In addition, this close relationship with our suppliers means greater benefits to our customers with extensive technical support both pre and post sales.

APPLICATION AREAS

- ◆ DEFECT DETECTION
- ◆ BARCODE & DATAMATRIX
- ◆ OPTICAL CHARACTER RECOGNITION
- ◆ MEASUREMENT & ANALYSIS

MULTIPIX IMAGING IS WORKING TO IMPROVE
MANUFACTURING OUTPUT

INDUSTRIAL AND MANUFACTURING

The ever increasing need to improve production techniques in all aspects of manufacturing has inevitably lead to more automation with vision systems becoming the de facto standard. The ability to train systems to scan, inspect and identify objects greatly reduces the risk of fault and failure, whilst being both consistent and reliable. The result is increased productivity and assured quality.

MULTIPIX IMAGING IS TARGETING THE FIGHT
AGAINST TERRORISM

SECURITY AND SURVEILLANCE

With the ever present threat of terrorism the demand for greater security is being satisfied by innovative camera technology. The improvements in image quality under normal daylight and infrared illumination, combined with the ability to sequence images from many cameras provide the security professional with an incredibly powerful tool to combat the various threats to our homes and families.

APPLICATION AREAS

- ◆ INTELLIGENT TRAFFIC
- ◆ COVERT & MOBILE
- ◆ BORDERS & HOMELAND
- ◆ COMMERCIAL

APPLICATION AREAS

- ◆ DNA ANALYSIS
- ◆ DRUG DEVELOPMENT
- ◆ COLONY PICKING
- ◆ BODY SCANNING

MULTIPIX IMAGING IS AIDING MEDICAL
AND GENETIC RESEARCH

MEDICAL AND SCIENCE

The use of high definition digital imaging applied to the world of science and research is continuing to expand the horizons in the understanding of the genetic makeup of the human body and the diseases that affect us. The use of vision makes the testing, treatment and monitoring of medical conditions much more effective and efficient, benefiting the whole of mankind.
